ADVICE SHEET 03

After root canal treatment: what to do

What you may feel and how to protect the tooth until it is restored.

RIGHT AFTER TREATMENT

- Wait until the anaesthetic has worn off before eating, so you don't bite yourself.

THE FOLLOWING DAYS

- Tenderness when chewing for a few days is common.
- The tooth is weakened: avoid hard food on that side until it is permanently restored.

THE NEXT STEP

- A root-treated tooth must be protected, usually with an onlay or a crown, to stop it breaking.

CALL THE PRACTICE IF

- swelling appears;
- the pain is severe or lasts more than a few days;
- the temporary filling has come out.
