ADVICE SHEET 11

After a filling

Anaesthetic, sensitivity, discomfort when biting: what to expect.

RIGHT AFTER

- Wait until the anaesthetic has worn off before eating or drinking anything hot.
- Keep an eye on children: they can bite their lip or cheek without feeling it.

THE FOLLOWING DAYS

- Sensitivity to cold or heat for a few days is common.

CALL THE PRACTICE IF

- the treated tooth feels high when you bite: a quick adjustment is enough;
- the pain gets worse or comes on by itself;
- the filling breaks or falls out.
